
SECONDARY BATTON (follows the the batton down the lineset cable until it reaches a certain point thus causeing the pipe spreaders to open. This batton would be attached to the grid or ceiling thus preventing a complete run in)

SUPPORTING WIRES

BATTON

PIPE SPREADERS

SPPREADER OUTRIGGERS (these are here so that as you run the lineset in, the spreaders open. The outriggers should, when the lineset is run all the way out, keep the supporting wires from being dirrectly under either batton.)
